DELTA

The platform stairlift for straight staircases

The Delta platform lift is the perfect solution to make straight indoor and outdoor staircases accessible for the wheelchair driver. The smooth transport of electrically powered wheelchairs is guaranteed by a loading capacity of 300 kg. Thanks to the aesthetic and user friendly design, this lift fits into any environment and will improve the users independence and quality of life.

The robust construction ensures a long working life and a reliable performance. Confirming to the highest safety and quality standards, the Delta is an inexpensive way to manage staircases in a pleasant way. Due to the extremely slim and compact design the platform occupies only a minimum of space, keeping the staircase free of obstruction.

Main advantages of the Delta platform stairlift

— Extremely slim and aesthetic design
— Installations on very narrow staircases
— Custom made platform sizes are possible
— Available in all RAL colours or as a stainless steel version
— Available as indoor and outdoor version
— Platform frame and mechanics are built from solid steel parts making the platform robust and secure against vandalism
— TÜV approved and manufactured according to the European standard EN 81-40

Delta - Technical Specifications

Loading capacity	Standard 225kg (optional 300kg)
Platform width (min-max)	600 – 900 mm
Platform length (min-max)	700 – 1.300 mm
Possible gradient	0 – 50°
Speed	0,06 – 0,12m/sec
Maximum length of straight rails	30m
Noise level	Under 60dB
Temperature range	+45°C down to -15°C
Minimum folded width	300 mm
Power supply (for charger)	1 × 230V / 50–60Hz
Certificates	TÜV certified to EN 81-40

Main options of the Delta

— Available in any RAL colour
— Custom made platform sizes up to W900mm x L1300mm
— Folding seat with automatic fold-up
— Additional battery pack
— Stainless steel version
— 90° access ramp
— Joystick control on platform
— Outdoor version
— Audio-visual alert

OMEGA

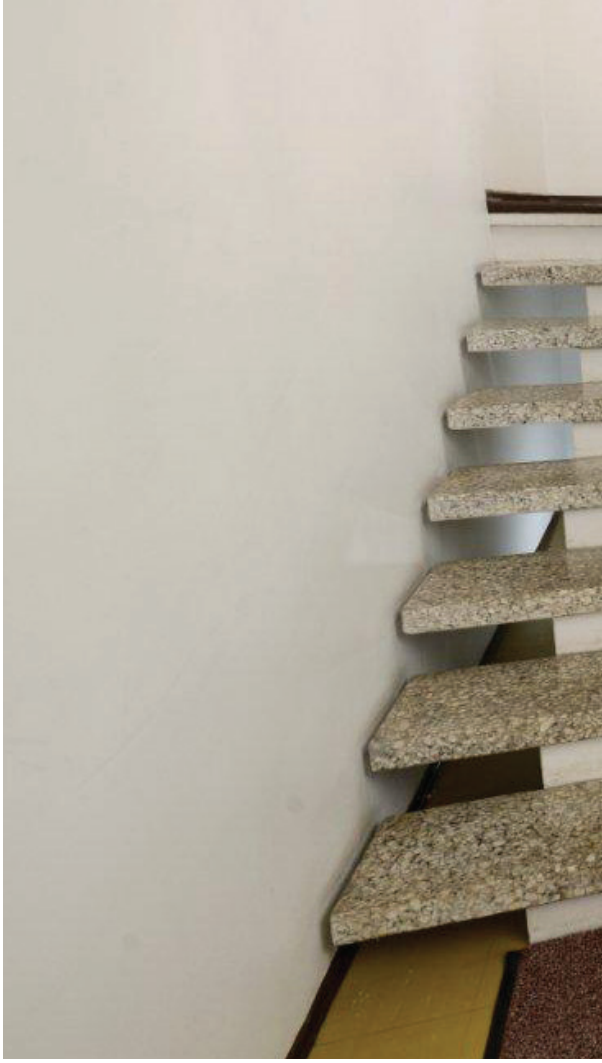
The platform stairlift for curved staircases

The OMEGA platform lift gives wheelchair users or mobility impaired per-sons the possibility to overcome staircases or steep ramps without the assistance of an attendant. It is designed for access over stairs with multiple levels, curves or intermediate landings. As an alternative to an elevator or a vertical platform lift, the Omega requires no structural changes to the staircase.

When the platform is folded, the OMEGA is the narrowest stairlift on the market, leaving maximum clearance on the staircase! Because of the compact construction, the installation is possible at almost all staircases. Indoors or outdoors - the lift gently integrates into every surrounding area. Whether for private or public uses, straight or curved staircases, the Omega is a synonym for mobility and quality of life.

Main advantages of the Omega platform stairlift

— The slimmest curved platform stairlift on the market
— Compact design allows installations on very narrow staircases
— Custom made platform sizes are possible
— Available in all RAL colours or as a stainless steel version
— Available as indoor and outdoor version
— Platform frame and mechanics are built



Omega - Technical Specifications

Loading capacity	Standard 225kg (optional 300kg)
Platform width (min-max)	600 – 900 mm
Platform length (min-max)	700 – 1.250 mm
Possible gradient	0 – 67°
Speed	0,06 – 0,15m/sec
Maximum length of rails	85m
Noise level	Under 60dB
Temperature range	+45°C down to -25°C
Minimum folded width	270 mm
Power supply	1 × 230V / 50–60Hz
Certificates	TÜV certified to EN 81-40

Main options of the Omega

— Available in any RAL colour
— Variable speed
— Folding seat with automatic fold-up
— Automatic plaform folding
— Stainless steel version
— 90° access ramp
— Joystick control on platform
— Outdoor version
— Customer made platform sizes up to
900mm in width and 1250mm in length

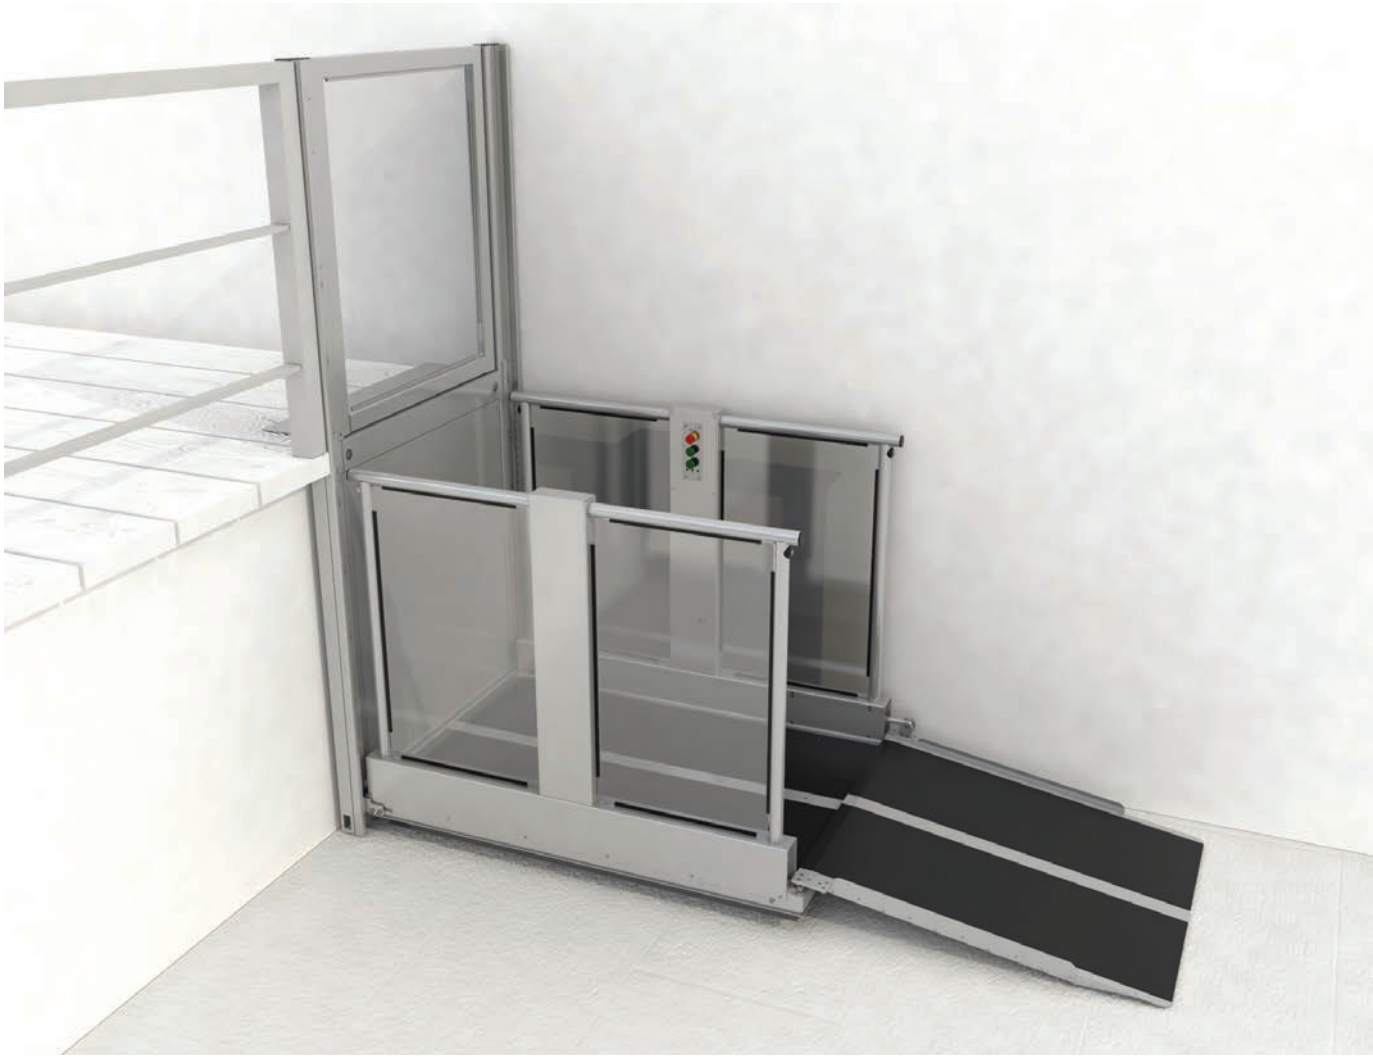
LIFTBOY 1 & 2

Where ramps are too steep or too long – where stairlifts or elevators are needless due to too small a difference in altitude – the Liftboy is the optimal solution. With the help of our Liftboy models 1 and 2, wheelchair users and physically disabled persons can get over differences in altitude of up to 83 cm.

The Liftboy is designed for indoor and outdoor use! As the weatherproof lifting platform with a total weight of only 70 kg can easily be put up, it offers a perfect solution also for urgent or temporary needs. The lift can be equipped with special side entry or exit, upper access gate or transport wheels.

Liftboy - Technical Specifications

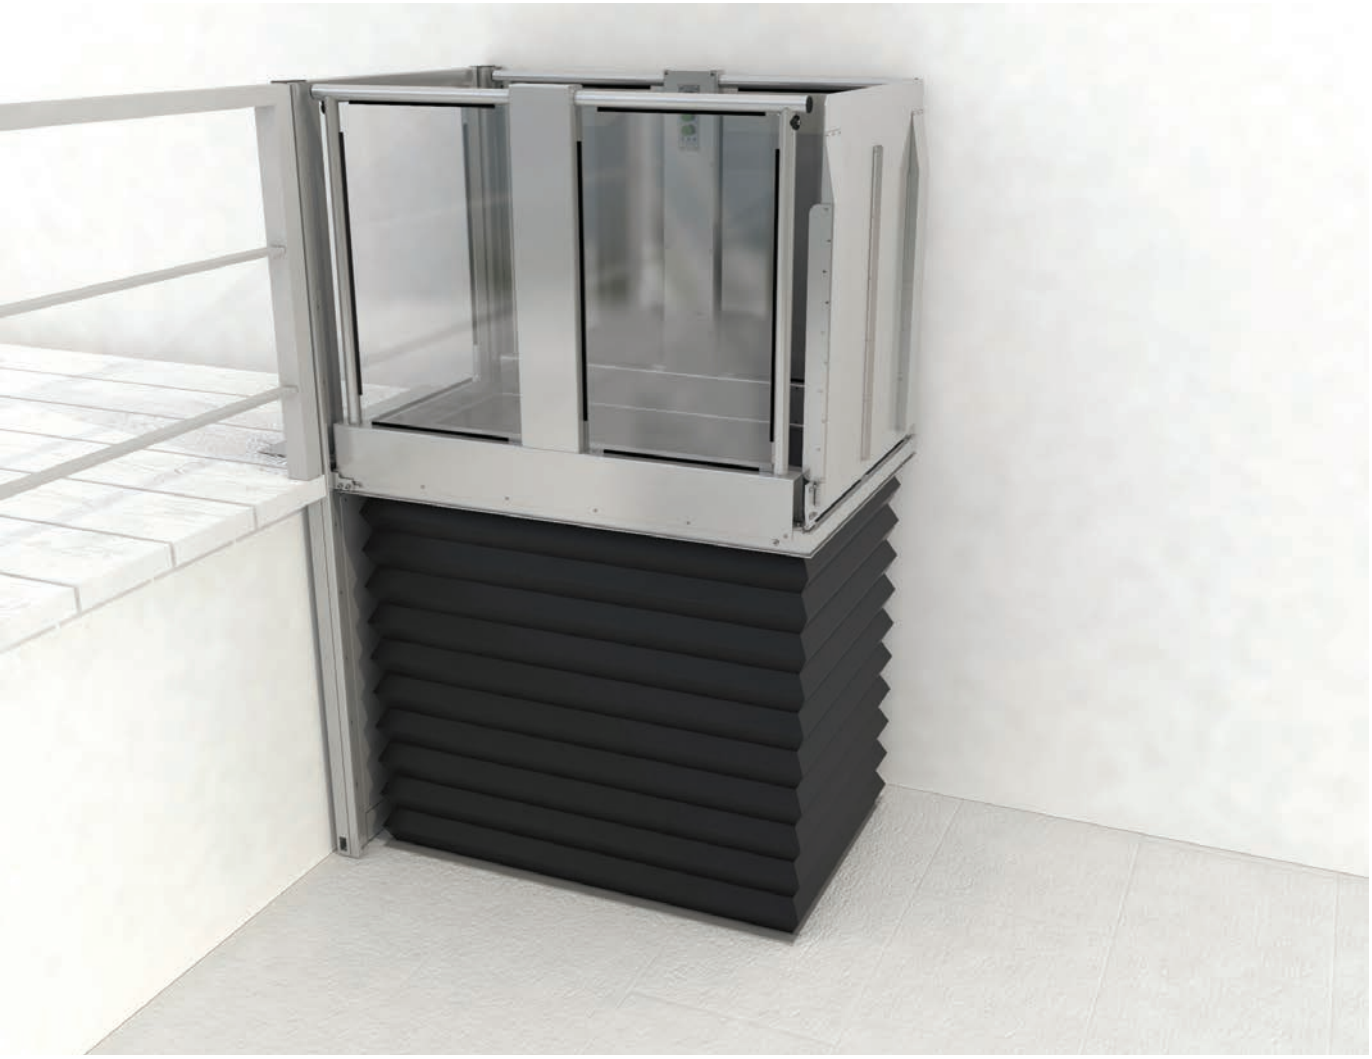
	Liftboy 1	Liftboy 2
Lifting height	595mm	830mm
Loading capacity	180kg	300kg
Lifting speed	15mm/s	15mm/s
Minimum height of platform	100mm	120mm
Drive system	24V actuator scissor	24V actuator scissor
Internal dimensions	713 × 1170mm	800 × 1495 mm
External dimension	810 × 1180mm	924 × 1505mm
Power supply	1 × 230V / 50–60Hz	1 × 230V / 50–60Hz



LIFTBOY 5

The Liftboy 5 was created to lift a wheelchair and a passenger safely up and down levels that reach up to 1300mm in height and has a loading capacity of 300 kg. This lift offers glass inserts in the upper gate and sidewalls and features an overall modern design. If required, this vertical lift can be equipped with a platform gate. Suitable for commercial properties, private homes as well as public buildings, this lift suits virtually any projects requirements due to its versatility, aesthetics, ease of use, reliable performance and its range of optional finishes.

The Liftboy 5's entry ramp folds up as a back door once the user is sitting comfortably on the platform. The folded door prevents the user from rolling backwards and falling off the lift. The ramp uses two scissor lifts to rise, which are both protected and unseen on all four sides. The lifts controls are on a stand inside the unit and feature easy operating buttons.



Liftboy - Technical Specifications

	Liftboy 5
Platform Width	900-1110mm
Platform Length	1400mm
Loading capacity	300kg
Lifting speed	25mm/s
Minimum height of platform	120mm
Drive system	24V actuator scissor (double scissor)
Internal dimensions	713 × 1170mm
External dimension	810 × 1180mm
Power supply	1 × 230V / 50–60Hz

GOVERNMENT GRANTS

WHAT ARE GOVERNMENT GRANTS?

Over the past few years, there has been a big push by the government to promote “ageing in place”, which means trying to keep people in their own homes or in retirement communities, rather than moving to a nursing home. In order to achieve this, the government is offering support, including services and equipment grants. Depending on your circumstances, you may be eligible.

WHAT HELP CAN I RECEIVE?

With the introduction of the NDIS (National Disability Insurance Scheme), the sector has undergone the most significant reform since Medicare. While there have been mixed reviews, the NDIS promises a more longterm approach of assistance and education. It is important to note that you have to be 65 years or younger to be considered for the NDIS. If you are over 65 years of age, you may be eligible for one of the below.

Home Care Packages (HCP) through My Aged Care are a way that older Australian’s can access affordable services to get assistance around the home. These are designed to cater for more complex needs and can include allowances for Assistive Technology (AT) at higher levels.

Equipment For Living Grant (EFL) through the Independent Living Centre ILC) funded by the Department of Communities (formerly DSC) aims to assist people in obtaining vital equipment not currently available through other funding channels. These need to be essential items that will support the user in everyday tasks around their homes and the community.

Since 2001 Motobility, formally known as Bluesky Healthcare has been a leading provider of quality and stylish mobility solutions, dedicated to helping Australian's enjoy a better quality of life.

Our extensive range of custom-made mobility products are specifically designed and manufactured to help you overcome mobility challenges and maintain a healthy and balanced way of life.
